

CSI Loan Marketplace

Deploy Excess Liquidity – Diversify Loan Portfolios – Maximize Earning Capacity

Optimize Your Loan Portfolio

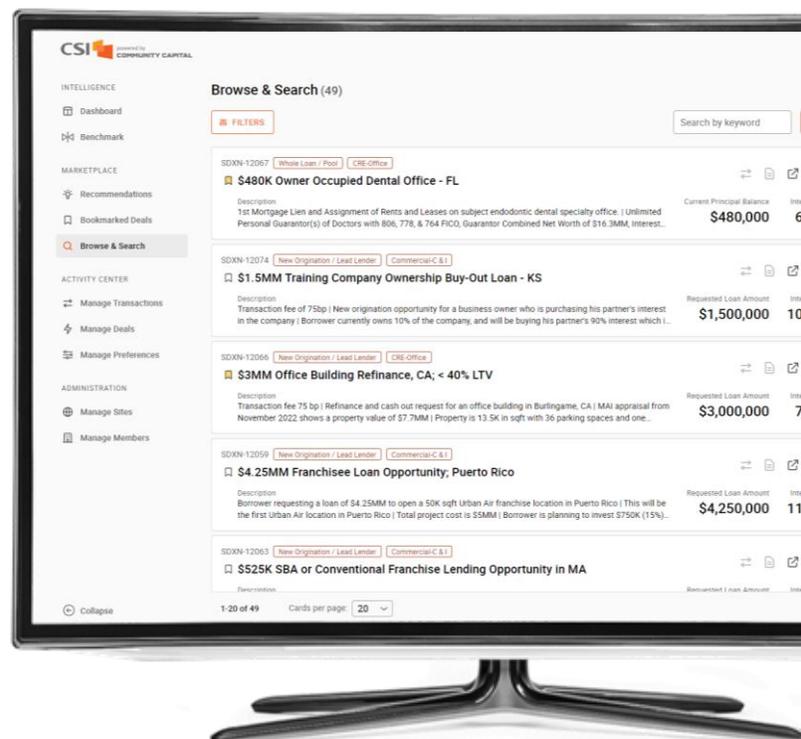

CSI Loan Marketplace, powered by Community Capital, enables financial institutions to access a highly-liquid, nationwide marketplace for evaluating, buying, selling, and originating loans of any type. This seamless digital exchange helps community banks overcome inefficient procedures, rebalance their portfolios, expand networks and optimally align with their target relationship profiles.

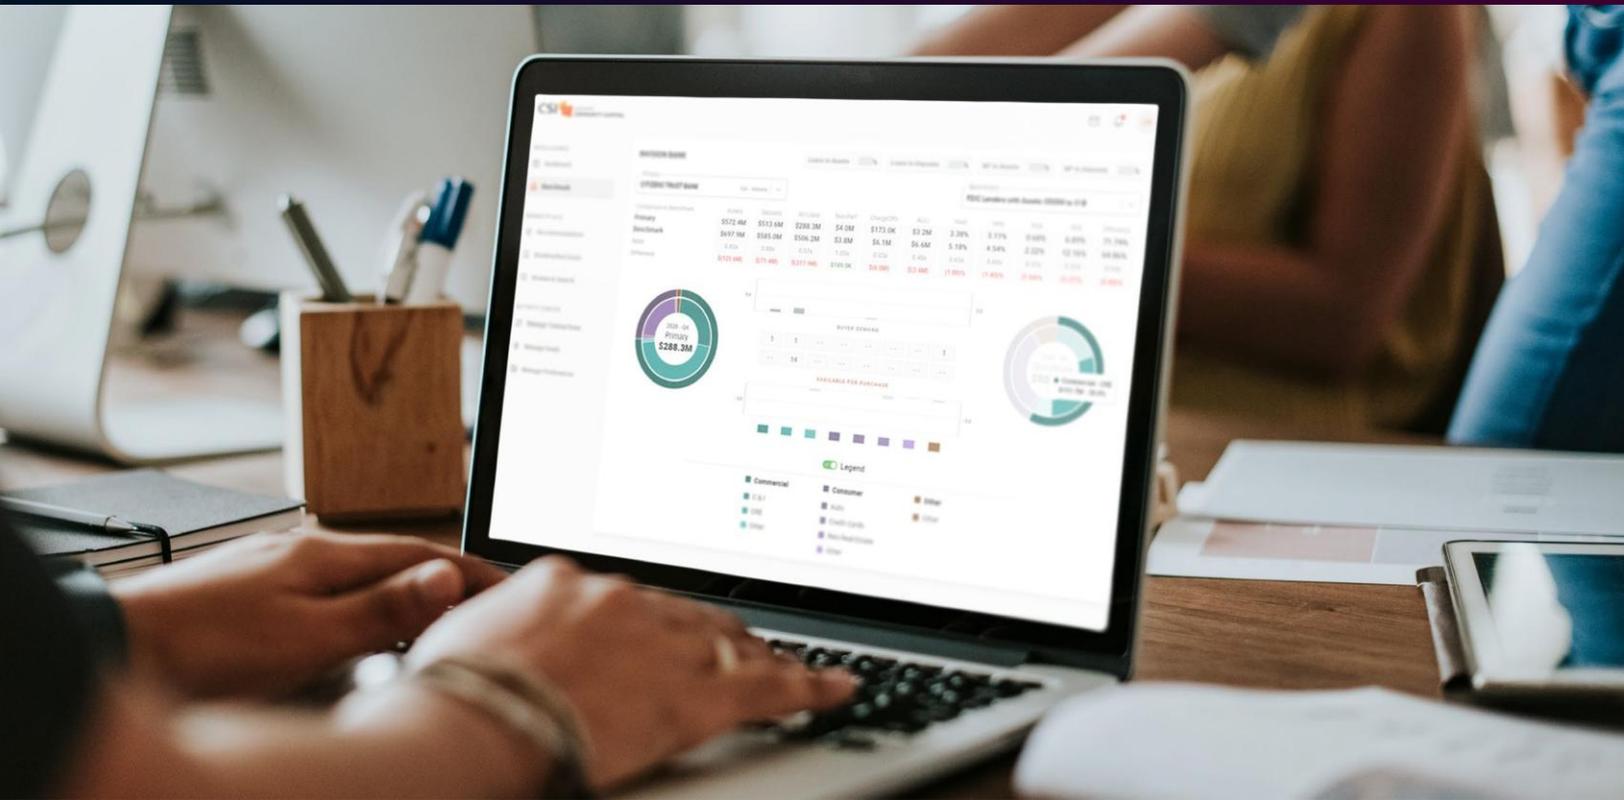

Grow Your Lending Network

CSI Loan Marketplace connects community banks and other financial institutions with each other, along with providing access to additional third-party originators and investors across the United States. The marketplace empowers members to:

- Expand transaction pipelines and sourcing channels without brokers or minimum purchase requirements
- Build a broader, more consistent counterparty and opportunity sourcing network of loan sellers and originators, along with new loan originations
- Optimize quality and price by selecting from a large, diverse volume of deal flow across multiple partner sources nationwide
- Monitor their bank's performance against peers, with interactive visualizations of current call report information.

Key Features

By shifting once manual processes to a digital loan transaction platform, CSI Loan Marketplace also enables:

Efficient Loan Execution – Consistently manage loan transactions through one team, using a manageable and auditable workflow that creates a faster, more efficient execution process

Seller/Borrower Anonymity – Retain anonymity until the non-binding bid is accepted

Simple Portfolio Management – Use a single, secure online platform to input, approve, review and track the status of every loan opportunity

A Decrease in Internal Resource Demands – Manage the transaction process through a single point rather than multiple parties across the institution

Customized Buying Preferences – Establish preferred loan types, so that only desired recommendations appear
